The competences of the chosen reference model (DIGCOMP) were correctly represented in the items formulated for the INCODIES model, which obtains high content validity.

**Recommendations**

Faced with the high number of indicators, it seems advisable to carry out a selection of indicators according to the evaluation objectives and the type of test that they wish to design.

**Future Works**

Applying other validation models of a qualitative nature for future research that provide complementary information and make it possible to prioritize the indicators according to the different educational contexts.
